

LIFT

P11104

With dual circuit vacuum system technology for extra safety, the '4-in-line' is the industry's most widely used vacuum lifter offering 180° rotation and 90° tilt. Onboard power permits cordless operation on cranes and hoists, while a lightweight steel and aluminium frame combines strength with durability.

Its flexibility and ease of handling make the 4-in-line the ideal general purpose lifter for site use. An optional short hook can also be fitted for installations under soffits and overhangs.

KEY FEATURES

- 320kg capacity
- Weight: 34kg
- 180° lockable rotation
- Manual tilting from vertical to horizontal
- Dual, independent vacuum circuits with two vacuum reserve tanks, vacuum gauges and two non-return valves
- Audio-visual low vacuum alert
- 12v rechargeable battery with integral 110v or 240v charger and battery energy gauge
- Compatible with low marking and heat resistant vacuum pads
- Vacuum Sucker not suitable for use in the rain – read more in our safety guide
- Maximum wind speed for safe use is 29km/h, 18mph, 16.5 knots or 8 m/s
