

BAG LIFTING FRAME

The Bag Lifting Frame, or bulk bag carrier, is a crane lifting frame designed for the safe and easy movement of 'tonne bags' and other bulk bags of materials or waste around site. The frame has one central lifting point for connecting to a crane or other lifting apparatus.

KEY FEATURES

- Robust design to withstand regular use.
- One central lifting point for connecting to a crane, or other suitable lifting apparatus.
- Much safer method for transporting bulk bags over short distances than balancing on the end of fork tines.
- Single connection point allows for faster and more efficient attachment to lifting apparatus.

TECHNICAL TABLE

Working Load Limit	1100kg
Length	1020mm
Width	1020mm
Height	165mm
Weight	25kg
